Partners for  
a healthier nation

Good for  
**BOTH**  
of you

MEDICAL MALE CIRCUMCISION

## WHAT DOES CIRCUMCISION HAVE TO DO WITH ME?

### 1 Enjoy lower risk

- Circumcision reduces a man's risk of contracting HIV by 60% and reduces the risk of getting some other STIs. This means he is less likely to put you in danger.
- Being with a medically circumcised man reduces your risk of cervical cancer. Circumcision lowers his risk of getting the virus that leads to cervical cancer in women.

### 2 Enjoy better hygiene

- Circumcision reduces smell and makes it easier for a man to keep his penis clean.

### 3 Enjoy being with a responsible man

- It takes courage and caring to make the decision to get circumcised. Be proud of your man's decision to plan for a better future.

## How can I support my partner?

### Share your enthusiasm

Tell your partner how getting medically circumcised can benefit both of you.

### Play 'nurse'

Encourage him to follow his wound care instructions and call or visit the clinic with any concerns.

### Be patient together

Proper healing requires abstaining from sex for 6 weeks. It's a short wait for a lifetime of benefits!

### Stay safe

Even after being circumcised, it's still important that you continue to use condoms and practice safe sex.

## What do I do next?

- Talk to your partner.
- Call your nearest New Start Clinic for an appointment or more information.
- Accompany him to a New Start Clinic if he prefers.
